Art Unit: 3744

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 49-50 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The specification does not provide a detailed description of an embodiment in which the same variable duty cycle signal is used to control the capacity of the compressor and the expansion valve nor a variable speed fan. At page col. 4, lines 4-16 of the specification a statement is made that a signal derived from the expansion valve controller can be fed to the compressor controller but not the use of the same duty cycle signal used to control the compressor also used to control an expansion valve nor is any disclosure of such a system is provided nor shown in any of the figures. Likewise, there is no disclosure of a system that in which the same duty cycle signal used to control the compressor is also used to control a variable speed fan.

Claims 2-5, 7-15, 22-24, 26-48 and 51-54 are allowed.

Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.
